Our Community
Achievements

(open data, benchmarks)

- Participation in the development of the Balsam Index (Version 2) to measure the quality of generative AI models in the Arabic language
- Providing over 35 billion tokens of Arabic language training data points to support the development of Arabic language models
- Providing Sadeed Dataset, a training dataset for automatic diacritization tasks
- Making data from more than 100 million training images available for image captioning model tasks.

 Access our open data repository.

Kawn Simply in Numbers

Models for language model
inferencing accelerate response by

62%

Developing a new method in language
model development through Arabic
language layer injection for large language
model training methods, reducing cost by:

45%

Massive specialized Arabic data for training
language models (more than 200 trillion data
tokens).

02T

Standardized Benchmark Data

 [Access our benchmark data repository.](#)

SadeedDiac-25

Standardized data for evaluating models' capabilities in generating Arabic texts.

Tarjama-25

Standardized data for evaluating models' capabilities in translating between Arabic and English.

Misraj-DocOCR

Standardized data for evaluating models' capabilities in converting images and files into structured data.
